Ring section pumps, also known as multistage ring section pumps, are a type of centrifugal pump that consists of multiple stages or impellers stacked in series within a casing. These pumps are commonly used for applications that require high-pressure pumping, such as in industrial processes, power generation, water supply systems, and oil and gas operations. The arrangement of multiple impellers allows ring section pumps to achieve high differential pressures efficiently.

Manufacturers are focusing on designing and optimizing ring section pumps for improved energy efficiency. This includes advancements in hydraulic design, motor efficiency, and variable frequency drive (VFD) technology to minimize energy consumption.
