The global Ring Type Joint (RTJ) Flanges market size is predicted to grow from US$ 2463 million in 2025 to US$ 3416 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

In 2024, global Ring Type Joint (RTJ) Flanges output was about 42 million units with a capacity near 50 million units, with average unit price USD 60, achieving an average gross margin of 28%. Ring Type Joint (RTJ) Flanges are precision-engineered pipe flanges designed with a metallic ring groove that accommodates a ring gasket, forming a high-integrity, metal-to-metal seal. They are primarily used in high-pressure and high-temperature applications such as oil & gas, petrochemical, power generation, and offshore industries. The supply chain of RTJ flanges begins with upstream raw materials like forged carbon steel, stainless steel, duplex, or alloy steel billets; proceeds through midstream manufacturing, involving forging, CNC machining of grooves, heat treatment, and precision surface finishing; and ends with downstream distribution, where flanges are supplied to EPC contractors, pipeline fabricators, and industrial maintenance companies. Major suppliers also collaborate with gasket manufacturers to ensure compatibility and performance standards as defined by ASME B16.5 and API 6A specifications.
