RIP electrical bushing is an important electrical insulation equipment. RIP electrical bushing is usually composed of a conductive rod, an insulating layer and an outer sheath. RIP electrical bushing isolates the conductive rod from the surrounding environment through its insulating layer, ensuring the safe transmission of current inside the conductive rod, while preventing the current from leaking into the surrounding environment and causing safety accidents. When electrical equipment is running, the bushing is subjected to multiple effects such as voltage, current and mechanical stress. The insulating layer can withstand high voltage and prevent electrical breakdown; the outer sheath protects the bushing from external mechanical damage and environmental factors.
