The global Riser Monitoring System (RMS) market size is predicted to grow from US$ 70 million in 2025 to US$ 96 million in 2031; it is expected to grow at a CAGR of 5.4% from 2025 to 2031.

The Riser Monitoring System (RMS) is an advanced digital offshore solution designed to monitor and optimize the performance of risers and ducts in real time. The system provides key data such as wave height, period, current profile, acceleration, displacement of the rig and platform, and fatigue damage accumulation through sensors such as ground wave radar, accelerometers and water level gauges. These real-time data help operators make more informed decisions in offshore operations, reduce non-productive time due to conservative measures, and improve overall operational efficiency. The advantage of RMS is that it eliminates the conservatism in traditional analysis methods, enhances safety, improves situational awareness, and optimizes future riser analysis and operation models through continuous monitoring and data analysis.

United States market for Riser Monitoring System (RMS) is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Riser Monitoring System (RMS) is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
