According to this study, the global RNAi Technology market size will reach US\$ million by 2031.

RNA interference is a relatively new concept in the field of medicine. It is a process in which the ribonucleic acid inhibits translation or gene expression by converting single-stranded mRNA to double stranded RNA, thereby neutralizing the target nucleic acids.

As an important force driving a new round of scientific and technological revolution, artificial intelligence has been of national strategic importance. Many governments introduces polices and increase capital investment to support AI companies. The Digital Europe plan adopted by the European Union will allocate €9.2 billion on high-tech investments, such as supercomputing, artificial intelligence, and network security. In order to maintain its leading position, the United States will increase its investment in artificial intelligence research and development in non-defense fields, from US\$1.6 billion to US\$1.7 billion in 2022. According to the latest data released by IDC, global artificial intelligence revenue was US\$432.8 billion in 2022, a year-on-year increase of 19.97%, including software, hardware and services.
