RNAi Therapy is a new treatment method that uses RNA interference (RNA interference, RNAi) to treat diseases. RNA interference refers to the introduction of double-stranded RNA molecules, so that the mRNA molecules of a specific gene cannot be translated into proteins, thereby achieving the purpose of inhibiting the expression of the gene. RNAi therapy utilizes the human body's own gene regulation mechanism. It has strong targeting, good therapeutic effect, and few side effects. It is a new type of treatment with great potential.
