The road blower is a small wind turbine. Its principle is to use the air flow generated when vehicles pass through the blower to rotate the blower and drive the generator to generate electricity. Although this type of equipment is not very powerful, due to the high density of traffic flow, it is able to produce a high power output for urban use.

Improve road traffic efficiency: Road blowers can reduce the temperature of the road surface by enhancing the air flow on the road surface, preventing high temperatures from softening the road and affecting vehicle driving, thereby improving road traffic efficiency. Enhance the service life of the road: The road blower can reduce the temperature of the road surface and reduce the friction between the vehicle tires and the road surface, thereby reducing the wear and tear of the vehicle on the road surface and extending the service life of the road.
