Road handlebars are the steering and control component of a road bicycle, designed to provide riders with efficient, comfortable, and aerodynamic hand positions for riding on paved roads. They are most commonly recognized in the form of drop handlebars, which curve forward and downward, allowing multiple grip positions that support climbing, sprinting, and long-distance endurance riding.

Road handlebars are engineered to balance aerodynamics, control, and ergonomics, enabling riders to maintain a streamlined posture while still having precise steering response. They are typically made from aluminum or carbon fiber, and may include integrated features such as internal cable routing, ergonomic shaping, and compatibility with modern brake–shift lever systems.

The core raw materials for road handlebars are mainly carbon fiber and aluminum alloys. Typical suppliers include Toray, MCCFC, Teijin, Hexcel, Hyosung Advanced Materials, and SGL Carbon. Road handlebar sales channels are primarily online and offline, with typical online platforms including Amazon, eBay, Alibaba, and JD.com. The single-line production capacity of road handlebars is significantly affected by material selection, manufacturing processes, and automation levels. Large-scale production lines typically have an annual capacity of 30,000 to 100,000 units. The gross profit margin for road handlebars ranges from 20% to 30%.
