The global Road Marking Thermoplastic Preheater market size is predicted to grow from US$ 434 million in 2025 to US$ 631 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

In 2024, global sales of Road Marking Thermoplastic Preheaters reached 12,000 units, with an average selling price of US$35,000 per unit. A Road Marking Thermoplastic Preheater is a device used to heat thermoplastic road marking paint, primarily for traffic marking construction on roads, parking lots, airports, and other locations. This equipment utilizes efficient heating technology to achieve the appropriate viscosity and flowability of the marking paint, ensuring uniform application and good adhesion, thus enhancing the durability and visibility of road markings. Road Marking Thermoplastic Preheaters are widely used in transportation construction, urban construction, and infrastructure projects, ensuring rapid and stable application of road markings, reducing construction time and maintenance costs. Upstream raw materials mainly include heating elements, electrical control systems, heat exchange devices, and related electronic components. Downstream customers include highway construction companies, road construction and maintenance companies, and airport construction companies. Global total production capacity is approximately 15,000 units per year, with an industry gross profit margin of approximately 30%-35%. In terms of downstream consumption, the road construction and maintenance industry accounts for the largest share, approximately 70%, while airport and parking lot projects account for 30%. In upstream materials, heating elements and electrical control systems account for approximately 40% of the cost. With the continued growth of global infrastructure construction and the increasing stringency of traffic management standards, the market demand for thermoplastic preheaters for road markings is gradually growing. Particularly in emerging market countries, the accelerated urbanization process and
