The road preview system is a driver assistance system based on advanced sensing technology and algorithms. It is used to perceive the information of the road ahead of the vehicle in real time, predict the vehicle's driving path and optimize dynamic control. The system collects road data through sensors such as cameras, lidar or radar, and adjusts the vehicle's steering, speed or suspension system in combination with the analysis algorithm of the preview point to improve driving stability and handling. The road preview system is widely used in autonomous driving and advanced driver assistance systems (ADAS), which can improve driving safety and comfort, especially in complex road conditions.
