The global Ring Internal Combustion Engine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

A ring motor is one that eliminates the mechanical components of a conventional mill drive. By mounting the rotor poles directly onto the mill, the mill becomes the rotor of a gearless motor. These large synchronous machines, also known as wrap-around or ring motors, are speed controlled by power electronics and magnetic fields. By eliminating the need for mechanical contact between the static and dynamic parts, gearless mill drives save a lot of energy and components and are more reliable.
