Robot Joint Cable Glands are mechanical sealing and strain-relief components used where electrical, sensor, communication, or power cables pass through robot joint housings. They protect cables from pullout, abrasion, dust, moisture, coolant, and repeated bending while maintaining enclosure sealing. Products are manufactured from engineering plastics, metals, elastomers, or hybrid materials and may incorporate flexible strain-relief structures optimized for repeated robotic motion.

The industrial chain of Robot Joint Cable Gland includes upstream engineering plastics, stainless steel, brass, elastomers, seals, fasteners, and molding materials; midstream covers structural design, molding, machining, threading, sealing-component integration, assembly, mechanical testing, IP testing, and packaging; downstream applications mainly include humanoid robots, industrial robots, collaborative robots, robotic arms, mobile robots, and automated equipment.
