The global Robot Lithium Battery market size is predicted to grow from US\$ 885 million in 2025 to US\$ 1737 million in 2032; it is expected to grow at a CAGR of 9.8% from 2026 to 2032.

Robot lithium batteries refer to rechargeable lithium-ion battery packs or battery systems used in various mobile robots and intelligent robotic devices. They typically consist of battery cells, modules, a battery management system, housing, connectors, protection circuits, and communication interfaces. These batteries are widely used in AGV/AMR warehouse logistics robots, cleaning robots, service robots, inspection robots, quadruped robots, humanoid robots, and special-purpose robots. Compared with general consumer batteries, robot lithium batteries place greater emphasis on safety, cycle life, energy density, power output, fast charging capability, communication management, and structural customization. In 2025, global Robot Lithium Battery production reached approximately 8078 k units, with an average global market price of around 112 USD/unit. The production capacity for Robot Lithium Battery in 2025 was approximately 10000 k units. The typical gross profit margin for Robot Lithium Battery between 20% and 40%.

The robot lithium battery market refers to the market for lithium-ion battery packs, modules, and smart battery systems used in different types of robots. Driven by the growth of warehouse automation, intelligent manufacturing, commercial cleaning, service robots, inspection robots, quadruped robots, and humanoid robots, demand is increasing for safe, long-life, lightweight, fast-charging, and intelligent battery systems. At present, AGV/AMR, cleaning robots, and service robots are the major application areas, while quadruped robots, humanoid robots, and special-purpose robots are expected to become faster-growing emerging segments. Market participants include

battery cell manufacturers, battery pack suppliers, BMS solution providers, and integrated battery system suppliers.
