Some medical robots, such as the Dinsow robot in Asia, are designed for elderly care. They set up video chats, medical alerts, and medication reminders for family members. These robots can help reduce the number of hospital visits and keep the elderly independent for longer. As the population ages, in countries such as Japan and the United States, we are facing greater medical staffing issues, and robots can help ensure that patients continue to receive quality care. Using robots to complete simple tasks can also help hospitals cut costs, reduce waste and simplify processes.

Nurses will always be an important part of providing quality care. Robots simply do not have the empathy, creativity and adaptability that our hardworking nurses in the medical system have. But robot nurses can lend a helping hand, allowing human nurses to focus on the important work of caring for patients.
