The global Robot Servo Drive market size is predicted to grow from US$ 1993 million in 2025 to US$ 4546 million in 2031; it is expected to grow at a CAGR of 14.7% from 2025 to 2031.

The servo system consists of three parts: servo driver, servo motor and encoder. The servo driver decomposes the information received from the controller into commands that can be executed by a single degree of freedom system, and then transmits it to the servo motor;The servo motor converts the received current signal into torque and speed to drive the control object; the encoder, as the feedback device of the servo system, determines the accuracy of the servo system to a large extent. With the rapid expansion of industries such as industrial robots and electronic manufacturing equipment, the overall market demand for servo systems has maintained a growth trend.
