Robot Tactile Data Gloves are wearable sensing systems used to capture human hand posture, finger motion, contact force, pressure, and tactile interaction data for robot teleoperation, imitation learning, training, and human-machine interaction. They typically integrate bend sensors, inertial sensors, force or pressure sensors, haptic actuators, wireless communication, and motion-tracking algorithms. Advanced systems can provide bidirectional interaction by both recording hand movements and delivering tactile or force feedback to the operator.

The industrial chain of Robot Tactile Data Glove includes upstream flexible sensors, IMUs, pressure sensors, haptic actuators, conductive textiles, microcontrollers, batteries, wireless modules, and fabrics; midstream covers glove design, sensor integration, electronics assembly, calibration, software development, motion algorithms, haptic control, and testing; downstream applications mainly include robot teleoperation,
