A tool changer is a device that is fixed on the wrist of the robot and allows the robotic cell to switch from one tool to another. This means that you can have several tools in the same area to complete a particular set of tasks.

Robotic tool changers in both developed and emerging economies will boost productivity over the forecast period and help narrow the economic gap among potential economies. Advanced economies such as the EU-5, the United States, Australia, Canada, and South Korea are expected to witness a decline in the working population owing to the high adoption rate of robotic tool changer technology. The economic gap is expected to narrow in the near future owing to the decline in the working population in these countries. On the other hand, emerging economies including China, Brazil, and
