The global Robot Vacuum Cleaners market size is predicted to grow from US\$ 5953 million in 2025 to US\$ 9940 million in 2031; it is expected to grow at a CAGR of 8.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A Robot Vacuum Cleaners (also called a robovac or autonomous vacuum cleaner) is a smart home appliance that uses sensors, algorithms, and automated navigation technology to clean floors autonomously without human intervention.

Technological iteration direction

Intelligent upgrade: Popularization of AI visual recognition and 3D mapping technology, improvement in path planning and obstacle avoidance accuracy. Differentiated functions such as voice control and robotic arms (such as corner cleaning) have become the focus of competition.

All-round product evolution: From single sweeping to 'sweeping, mopping and disinfection integrated', self-cleaning base stations and automatic dust collection functions have become standard features. The battery life has exceeded 8 hours, and solid-state battery technology has enhanced continuous operation capabilities.

Industry challenges and user pain points

Controversy over cleaning effect: Some users have reported problems such as water stains left after mopping the floor and secondary pollution around the base station, which have affected the repurchase rate. The high-end models (with an average price of 452 US dollars) have better performance, but the experience of mid-to-low-end products varies.

Intensified market competition: The global market share of Chinese brands (such as Roborock and Ecovacs) has increased, squeezing the market share of traditional brands like iRobot. Price wars and the phenomenon of homogenization have emerged, and technological barriers have become the key to breaking through.

Future opportunities

Scene expansion: Upgrade from 'cleaning tools' to 'home service managers', integrating into the smart home ecosystem. The growth in demand for niche scenarios such as elderly care and maternal and infant care has given rise to customized products.

Policy and industrial chain synergy: China's 14th Five-Year Plan promotes the localization of core components to reduce production costs. The integration of online and offline channels enhances the efficiency of user reach through experience stores.
