A Robot Voluntary Milking System (RVMS) is a modern technology used in dairy farming to automate the milking process. Instead of relying on manual labor, such as hand-milking or using stationary milking machines, RVMS allows cows to voluntarily enter a milking station whenever they feel the need to be milked. RVMS offers several advantages over traditional milking methods, including increased flexibility for the cows, reduced labor requirements, improved milk quality, and enhanced data collection for herd management. However, the initial investment in RVMS technology can be significant, and proper training and maintenance are essential for its successful implementation.

The global Robot Voluntary Milking System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
