## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Mostly used in pipeline, large vessel, or holding tank inspections, Robotic Crawlers are another device in the Remote Visual Inspection (RVI) Technician's toolkit. Where long distances need to be traveled in order to complete an inspection, robotic crawlers operate much like a remote control car with a controllable camera. A long controlling distance and battery life are required for robotic crawlers. Because Foreign Object Debris (FOD) can pose a real threat to maneuverability, most Robotic Crawlers come equipped with tank-like treads or miniature construction-grade tires.

The global Robotic Crawler market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
