Abstracts

The global Robotic Positioners market size is predicted to grow from US$ 1689 million in 2025 to US$ 3173 million in 2032; it is expected to grow at a CAGR of 9.6% from 2026 to 2032.

In 2024, global Robotic Positioners production reached approximately 0.92 M units, with an average global market price of around US$ 1717 per unit.A robot positioner is an auxiliary motion device or mechanism used in robotic systems to manipulate the orientation and position of a workpiece, tool, or even the robot itself during automated operations. Unlike the robot arm, which provides active manipulation, the positioner serves as an external axis (often referred to as a robotic positioner or external positioning unit) that synchronizes with the robot controller.

Core Structural Features

Drive System: Driven by a servo motor or reducer, supporting high-precision rotation and angle control.

Load-bearing Structure: Single-axis, dual-axis, or multi-axis rotary platforms, capable of handling workpieces of varying tonnages.

Control Interface: Seamlessly integrated with the robot controller, supporting offline programming and real-time feedback.

Safety Features: Overload protection, emergency stop, and collision detection.

Modular Structure: Easy to combine and expand, suitable for integration with welding workstations and spray lines.

info@marketpublishers.com

High-Precision Positioning: Repeatability typically reaches ±0.05–0.1 mm.

Production Capacity

Conventional Manufacturers: Annual production capacity of 500–1,000 units per plant, primarily focusing on general-purpose single-axis/dual-axis products.

Specialized Manufacturers: Annual production capacity of 2,000–3,000 units per plant, serving the high-end equipment, heavy industry, and automotive industries.

Growth Drivers:

Increasing automation in the automotive and construction machinery industries is driving demand for robotic welding workstations.

Increasing demand for high-precision positioning of large structural components in the marine and aerospace sectors. Industry 4.0 is driving smart production lines and flexible manufacturing, increasing demand for robotic positioners.

Manufacturing is rapidly expanding in emerging markets (India, Southeast Asia, and the Middle East).
