A reamer is a mechanical cleaning device that is integrated into an automated robotic welding system. Reamers are typically used to clean torches utilized for arc welding applications. When used it removes the excess buildup of spatter from inside the welding torch's consumables, which include the nozzle, contact tips, and retaining heads. Reamers can be mounted in any position but should be close to the welding robot for optimal performance. The frequency of reaming depends upon the workpiece and application, but torches using cleaning stations are typically cleaned every 5 to 15 parts. Monitoring the welding operation will help users determine the best reaming frequency for their torch.

Robotic reamers are specialized tools used in robotic machining and manufacturing processes. Reaming is a machining process that involves enlarging and finishing a hole in a workpiece to achieve a precise diameter and smooth surface finish. Robotic
