The report requires updating with new data and is sent in 48 hours after order is placed.

The global Robotic Welding market size is predicted to grow from US\$ 10830 million in 2025 to US\$ 21530 million in 2031; it is expected to grow at a CAGR of 12.1% from 2025 to 2031.

Robotic welding is the use of mechanized programmable tools (robots), which completely automate a welding process by both performing the weld and handling the part. Processes such as gas metal arc welding, while often automated, are not necessarily equivalent to robot welding, since a human operator sometimes prepares the materials to be welded. Robot welding is commonly used for resistance spot welding and arc welding in high production applications, such as the automotive industry.

For the major players of Robotic Welding, Fanuc maintained its first place in the ranking in 2019, followed by ABB, Yaskawa, KUKA and Kawasaki Heavy Industries. Top 5 players accounted for 38% of the Global Robotic Welding revenue market share in 2019.

The manufacturer headquarters is mainly distributed in Europe, China, South Korea and Japan.

On the basis of product type including Arc Welding and Spot Welding. Arc Welding segment accounted for the largest sales volume market share by nearly 59% in 2019.

In the applications, there are Automotive & Transportation, Electricals & Electronics and Metals & Machinery. Automotive & Transportation segment was estimated to account for the highest market share of 36% in 2019.
