Anatomical bone plates are widely used in the medical field, mainly reflected in:

Aging population: As the global population aging trend intensifies, the incidence of orthopedic problems such as fractures and bone defects is also increasing. The elderly are more prone to fractures, and anatomic plates can provide stable fracture repair, so the demand will continue to grow in the elderly population.

Increase in sports injuries: The popularity of sports and people's emphasis on healthy lifestyles have led to an increase in sports injuries. Anatomical plates play an important role in sports injury repair by rapidly stabilizing fractures and promoting healing, so demand is also increasing in the athletic population.

Technological progress and innovation: Continuous progress and innovation in medical technology have promoted the development of anatomical bone plates. The introduction of new materials and designs has allowed plates to be lighter, stronger, and more rigid, while also improving surgical precision and outcomes.

Popularization of medical insurance: With the popularization and expansion of medical insurance coverage, more people can obtain financial support for orthopedic surgery and treatment.
