Rock Drill Rods are steel pipes used to connect the surface equipment of the drilling rig and the drilling and grinding equipment or bottom hole device at the bottom of the drilling. Its main function is to transmit torque and convey drilling fluid, and the wellbore is deepened by gradually lengthening the drill rod. The drill rod must be able to withstand huge internal and external pressure, twisting, bending and vibration.

Rock Drill Bits are tools used in rock drilling engineering, and their structure usually includes drill bit body, drill tail, drill bit nozzle, blades and center shaft. The drill bit breaks the rock through rotation and impact to achieve the purpose of rock drilling.
