## Abstracts

The global Rock Wool Blanket market size is predicted to grow from US\$ 187 million in 2025 to US\$ 248 million in 2031; it is expected to grow at a CAGR of 4.8% from 2025 to 2031.

The high compression strength and tensile strength of rock wool blanket? together with its low water and moisture absorption, lasting dimension stability against temperature variations, moisture and aging, make it versatility and compatibility with various external wall insulation systems, and keep its ever lasting thermal, acoustic and fire insulation properties.

Energy efficiency regulations and standards in the construction industry continue to drive the demand for insulation materials, including rock wool. Sustainability and environmental considerations are influencing construction practices. EMA rock wool insulation is valued for its sustainability characteristics, as it is made from abundant and recyclable materials. It is also non-combustible and can contribute to fire safety in buildings. Builders and developers seeking green building certifications such as LEED (Leadership in Energy and Environmental Design) often choose insulation materials that contribute to energy efficiency and sustainability. EMA rock wool may be favored in such projects. The overall growth of the construction industry, including residential, commercial, and industrial sectors, is a key driver for the rock wool insulation market. As more buildings are constructed or renovated, the demand for insulation materials increases.
