Roll-off garbage truck is a special vehicle designed for transporting large-capacity garbage bins or waste containers. Its core feature is the use of slide rails and cable (or hook arm) mechanisms, which enable the vehicle body to 'roll' the sliding garbage bin onto the car body or unload it from the ground, achieving rapid loading and unloading and transportation. The vehicle is usually equipped with a hydraulically driven cable hoist or hook arm system, which pulls the garbage bin onto the vehicle body rails by winch or traction, and assists in positioning and sliding through the rear rollers. It is suitable for scenes that require high-frequency and large-capacity garbage removal, such as construction sites, industrial areas, and urban solid waste transfer stations. Roll-off garbage trucks have the advantages of large loading capacity, high operating efficiency, and strong container versatility. They are especially suitable for multi-container circulation operation modes, which can significantly improve the flexibility and economy of solid waste transportation systems.
