The roll-off truck cable hoist is a hydraulically driven device installed on the chassis of a heavy truck, mainly used for loading, transporting and unloading large rollable containers (such as open garbage containers, construction waste containers, etc.). It connects the front end of the container through a steel cable and pulley system to achieve the action of 'pulling' the container on the vehicle body or 'lowering' it to the ground. Compared with the chain hoist, the cable type has the advantages of smoother operation, stronger adaptability to the ground, and suitability for boxes of different lengths. It is widely used in construction sites, urban waste management, recycling stations and industrial loading and unloading scenarios. Its structure usually includes a slideway assembly, a steel cable drum, a hydraulic cylinder, an auxiliary pulley and a locking mechanism, etc., which can support vehicles with different wheelbases and load tonnages. Due to its high modularity and flexibility, this equipment has become a key component of garbage transportation and material recovery systems in North America, Europe and other places.
