A roll-off truck is a special truck designed for loading, transporting and unloading sliding boxes (such as construction waste boxes, garbage boxes, recycling boxes, etc.). Its biggest feature is that the boxes are 'rolled' onto the body rails through a hydraulic cable or hook arm system, or placed steadily on the ground from the body. This type of vehicle is usually equipped with open and replaceable containers, suitable for scenes such as building demolition, solid waste transportation, recycling station operations, and large-scale industrial clearance. It has the characteristics of high loading and unloading efficiency and strong container versatility. Roll-off trucks can be divided into two types according to the drive system: cable hoist and hook lift. According to the chassis, they can be divided into single-axle, double-axle or multi-axle heavy-duty types. Its advantage is that one vehicle can dock multiple boxes of different capacities and functions, significantly improving resource utilization efficiency. It is an indispensable key transportation equipment in modern urban and industrial waste management systems.
