A roll splitter for paper is a specialized machine that is used to split large rolls of paper into smaller, more manageable rolls. It is particularly useful in industries where handling and processing large rolls of paper can be difficult or inefficient.

The splitting process involves placing the large paper roll onto the machine and securing it firmly. The cutting blades or circular knives are then activated, and they cut through the width of the paper roll, creating two or more smaller rolls. The machine may have adjustable settings to control the width and number of smaller rolls produced.

Roll splitters are commonly used in the paper manufacturing and converting industry. They enable efficient production by allowing large parent rolls of paper to be trimmed and split into smaller rolls that are easier to handle, transport, and use in various applications.
