A Roll to Roll Vacuum Coating System is a type of manufacturing equipment used to deposit thin films onto flexible substrates such as plastic films, paper, or metal foils. It is a continuous process where the substrate is unwound from a roll, passed through a vacuum chamber, and then rewound onto another roll after the coating process is complete. The vacuum chamber is used to create a low-pressure environment, which allows for precise control of the coating process. Various techniques such as evaporation, sputtering, or chemical vapor deposition can be used to deposit the thin films onto the substrate. Roll to Roll Vacuum Coating Systems are commonly used in

industries such as electronics, solar cells, displays, and packaging. They offer high production rates, uniform coating thickness, and the ability to coat large areas of flexible substrates efficiently.
