Drum oven conveyor belts are high-temperature resistant conveyor belts specifically designed for continuous baking processes. Typically made of woven or connected stainless steel wire, they possess excellent heat resistance, dimensional stability, and non-stick properties, ensuring uniform baking and efficient transport of bread, pastries, cookies, and other baked goods in automated production lines. The drum oven conveyor belt industry chain includes upstream stainless steel wire, surface treatment agents, and high-temperature resistant coatings; midstream involves wire mesh weaving, conveyor belt assembly, heat treatment, and surface finishing; downstream applications cover baking production lines, industrial ovens, and automated food processing facilities, providing installation, maintenance, and replacement services to ensure stable performance and service life. In 2025, the global production of drum oven conveyor belts was approximately 12 million square meters, with a global average market price of approximately US\$35 per square meter. The gross profit margin of major companies in the industry is between 25% and 40%. In 2025, the global production capacity of drum oven conveyor belts was approximately 15 million square meters.
