Rolled ice cream maker refers to a specific type of equipment used to make rolled or Thai-style ice cream. It typically consists of a refrigerated stainless steel plate or surface with multiple compartments or channels.

To make rolled ice cream, a liquid ice cream base is poured onto the frozen plate, and various mix-ins, such as fruits, cookies, or chocolate, can be added. As the liquid base comes into contact with the cold plate, it rapidly freezes and solidifies. Using spatulas or other utensils, the frozen mixture is then rolled up into thin, cylindrical shapes that resemble scrolls or rolls.

Rolled ice cream makers often have an adjustable temperature control system, allowing the operator to set the desired temperature on the plate for the ice cream to freeze quickly and evenly. They may also feature a refrigeration system to maintain the cold temperature of the plate throughout the rolling process.

Rolled ice cream has gained popularity for its visually appealing presentation and customizable flavors. Rolled ice cream makers provide a means for businesses, such as ice cream shops or food trucks, to produce this unique type of ice cream right in front of customers, offering a fun and interactive dessert experience.
