Roller Brake Tester is a stationary diagnostic device used to evaluate the braking performance of vehicles by simulating real-world braking conditions. It consists of a set of motorized rollers embedded in the ground or mounted above it, onto which a vehicle's wheels are driven. When the brakes are applied, the system measures parameters such as braking force, imbalance between wheels, and overall brake efficiency. Roller brake testers are widely used in vehicle inspection centers, fleet maintenance facilities, and service workshops for both light and heavy vehicles. Their precision and ability to test each axle individually make them essential for ensuring safe and compliant brake system performance.
