The global Roller Hearth Kiln for Lithium-ion Battery Cathode Materials market size is predicted to grow from US\$ 600 million in 2025 to US\$ 1122 million in 2032; it is expected to grow at a CAGR of 9.9% from 2026 to 2032.

A Roller Hearth Kiln for Lithium-ion Battery Cathode Materials is a continuous industrial furnace specifically designed for the high-temperature sintering of cathode materials (such as lithium iron phosphate and ternary materials). It uses rotating ceramic rollers as a conveying medium to drive containers (saggers) containing raw materials to move slowly within the furnace chamber, allowing the materials to undergo physicochemical reactions under precisely controlled temperature and atmosphere.

The upstream core of the lithium-ion battery cathode material roller kiln lies in high-precision components and special materials, including high-performance heating elements (such as silicon carbide rods and molybdenum wires), corrosion-resistant ceramic rollers, high-purity synthetic mullite saggers, and a precision atmosphere control system. The midstream is the kiln integration and manufacturing stage, where the core barriers lie in the design of thermal uniformity, atmosphere sealing, and automated transmission systems, especially atmosphere control technology for high-nickel ternary materials. The downstream directly serves lithium-ion battery cathode material manufacturers (such as Ronbay, DangSheng, and Defang Nano), for the sintering of lithium iron phosphate and ternary materials. With the advancement of solid-state batteries and high-nickel processes globally, downstream applications place increasingly stringent requirements on the kiln's single-line capacity, energy efficiency, and intelligent management.

The mainstream price of a roller kiln for lithium battery cathode materials is

approximately US\$600,000 to US\$1.3 million per set. Global sales are projected to reach nearly 800 sets by 2025. The gross profit margin for most of the equipment is around 10%-25%, while high-end customized projects can reach 30%+.
