Roller press gear reducer is the core transmission component in the roller crushing system. It is mainly used to convert the high-speed and low-torque power output by the motor into low-speed and high-torque to drive the heavy-duty rollers in the roller press to achieve efficient material compression and crushing. This type of reducer usually adopts a multi-stage gear transmission structure, which has the characteristics of large transmission ratio, strong load-bearing capacity, and stable operation. It can adapt to continuous heavy-load operation in high-intensity working conditions such as cement, raw materials, and slag. Its internal gears are mostly made of high-quality alloy steel and are processed by carburizing quenching, precision grinding and other processes to ensure high strength and high transmission accuracy.
