Roller press planetary gearbox is widely used in material crushing and processing equipment in industries such as mining, cement and steel. It adopts a planetary gear system, through which multiple planetary gears rotate around the central gear to achieve efficient multi-stage reduction and powerful torque output. This design is not only compact, but also can evenly distribute the load, significantly improve the load-bearing capacity and operation stability. The box body is usually made of high-strength cast iron or steel, and the internal gears are precision machined and heat-treated to improve wear resistance and fatigue resistance. Advanced sealing technology prevents lubricating oil leakage and external impurities from invading, ensuring long-term stable operation.
