As the name suggests, a drum sail is a sail system composed of one or more rotating cylinders (drums). These rollers are mounted on the ship in a specific way. When the wind blows over the rollers, the rollers will accelerate their rotation, using the Magnus effect to generate a pressure difference on both sides of the roller, thereby generating a force perpendicular to the direction of fluid flow, which can propel the ship forward. The working principle of the roller sail is mainly based on the Magnus effect. The Magnus effect refers to the fact that when a rotating object moves in a fluid, a pressure difference will be generated on both sides of it, thereby generating a force perpendicular to the direction of fluid flow. In a roller sail, when the wind blows over the rotating roller, the rotation of the roller causes the wind to produce different flow speeds and pressures on both sides of the roller, thereby generating a forward thrust, which propels the ship forward.

A drum sail is a device that uses wind power to propel ships. Its principle is based on the Magnus effect, that is, when a rotating object moves in a fluid, a pressure difference will be generated on both sides of it, thereby generating a force perpendicular to the direction of fluid flow. This force can be used to change the trajectory of the object and provide auxiliary thrust for the ship. As a green shipping technology, drum sails have regained attention in the shipping industry in recent years. It is mainly used in scenarios that require long-term sailing, such as ocean shipping, to save fuel and reduce emissions by reducing the load on the main engine. With the advancement of science

and technology, the design and manufacturing technology of drum sails are also constantly updated and improved. For example, by optimizing parameters such as the shape, material and rotation speed of the drum, the efficiency and stability of the drum sail can be further improved. In summary, the drum sail market is in a rapid development stage and has broad market prospects and development potential.
