Roof adhesives help in binding different sheets of bitumen or asphalt roll roofing together. Roof adhesives can be used in hot and cold forms and are commercially available in a variety of shapes. Roof adhesives enable physical interlocking and chemical bonding between materials and these have high environmental resistance. Primers can be used as sealers. These provides a superior non-porous finish on topcoats. Primers are also known as undercoats. These are applied on materials before painting. Priming on a surface helps improve paint durability, as it imparts additional protection for the material that is being painted. Roof adhesives and primers provide high strength bonds, durable sealing, excellent low temperature flexibility, are quick and easy application, and prevent discoloration and staining. Roofing adhesives and primers are resistant to UV rays, rain, heat, salt water, and weather.
