Roof-mounted air conditioning (Roof-mounted air conditioning system) is an air conditioning unit that integrates cooling, ventilation, and air purification functions. Installed on the roof of a vehicle or building, it is commonly used in buses, RVs, rail vehicles, construction machinery, and modular buildings. This system saves interior space and optimizes air circulation through its rooftop layout, supporting independent temperature control and intelligent monitoring. Its upstream supply includes core components such as compressors, condensers, evaporators, fans, electronic control units, and refrigerants, with raw materials primarily consisting of copper, aluminum, ABS plastic, and environmentally friendly refrigerants. Downstream supply encompasses vehicle manufacturers, RV and rail transportation manufacturers, and cold chain transportation equipment integrators. With the increasing trends of electrification and intelligentization, Roof-mounted air conditioning is developing towards lightweight design, high energy efficiency, and remote intelligent control.
