Roof Ridge Vents are vents that are installed on the roof ridge line and are designed to promote ventilation and air movement in the roof space. They are usually located on the ridge line where the two slopes of the roof meet, and are achieved by installing a continuous ventilation device on the ridge line. These vents typically consist of a specially designed roof or ridge cap that runs along the roof ridgeline and covers one or more vents. These vents can be open gaps or holes that allow air to enter naturally from the bottom of the roof and exit through the vents at the top of the ventilator.

Roof Ridge Vents are often viewed as an effective roof ventilation solution that can increase a building's energy efficiency, improve indoor air quality, and extend the life of your roof. They have a wide range of applications in residential, commercial and industrial buildings.
