The construction of room cell module offers consistency in construction, as it significantly reduces onsite labor requirements, thus resulting in substantial cost savings. This module construction has minimal impact on the business and keeps it running smoothly as more than 80% of the construction is performed offsite. Being a greener construction technique, this process generates less waste in comparison with the on-site construction, resulting in low disturbance at site. Technological implications such as big data, artificial intelligence, building information modeling (BIM), etc, provides an overall ecosystem and nature of work to engineers for building management, architecture, quantity surveying, and structural engineering, thus enhancing the demand of the market worldwide.
