## Abstracts

The global Room Service Robots market size is predicted to grow from US\$ 557 million in 2025 to US\$ 2801 million in 2032; it is expected to grow at a CAGR of 26.5% from 2026 to 2032.

Room service robots can navigate between floors, operate elevators, and communicate with guests via a digital touch screen on his 'face.' The system allows staff to deploy a robot to deliver towels, amenities, or room service at the touch of a button instead of performing these tasks themselves.

The market drivers for Room Service Robots are the increasing demand for contactless and efficient service delivery amid the Covid-19 pandemic, the labor shortage and high turnover rate in the hospitality industry, the rising guest expectations for personalized and innovative experiences, and the advancement of artificial intelligence and robotics technologies.

The constraints of Room Service Robots are the high initial and maintenance costs, the lack of human warmth and empathy, the potential technical failures and security risks, and the ethical and social concerns regarding the displacement of human workers.

The future opportunities for Room Service Robots are the development of more intuitive and empathetic robots that can provide customized and interactive services, the expansion of robot applications in different types of hotels such as boutique, luxury, or budget hotels, and the creation of a competitive advantage and brand differentiation for hotels that adopt robots?
