The global Rotary Centrifugal Sifter market size is predicted to grow from US\$ 318 million in 2025 to US\$ 465 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

A rotary centrifugal sifter uses high-speed rotating blades to generate centrifugal force, throwing materials against the inner wall of the screen for efficient screening. It is suitable for grading, removing impurities, and safely screening powders and granules, and is widely used in industries such as food, chemicals, pharmaceuticals, and mining. Its typical structure includes a feed inlet, rotating blades, a screen drum, and a discharge port. Screen sizes range from 20–300 mesh, with a capacity range of approximately 100–1800 kg/h, power output of 2.2–7.5 kW, and speeds of 620–940 rpm. Available in carbon steel or 304/316 stainless steel, it offers high efficiency, low noise, and easy cleaning. The price of rotary centrifugal sifter varies significantly depending on the model and capacity. Standard models, such as the FTS-190, cost approximately \$2,800–\$4,500 and have a capacity of 100–300 kg/h. Major manufacturers, such as Gericke and SWECO, have annual production capacities of approximately 1,200 and 1,500 units per line, respectively. The industry's overall gross profit margin ranges from 30% to 55%, with high-end customized products reaching up to 60%.

The rotary centrifugal sifter industry chain encompasses three major links: upstream components, midstream manufacturing, and downstream applications. The upstream segment primarily includes the screen (such as stainless steel or nylon mesh; mesh accuracy determines screening efficiency), the motor and reducer (with a power range of 2–10 kW, both domestically produced and imported), and the screen material (carbon steel for industrial powders, stainless steel for food and pharmaceuticals). Midstream

manufacturing involves processes such as laser cutting, CNC bending, welding, and polishing. The assembly process includes screen tensioning, seal installation, and electronic control system commissioning. Major companies have an annual production capacity of approximately 500–1,500 units per line. Downstream demand is broadly distributed across the food (e.g., COFCO), chemical (e.g., BASF), pharmaceutical, and new materials industries (e.g., CATL), creating a stable market for industrial screening equipment.
