The global Rotary Compressor for Air Conditioner market size is predicted to grow from US$ 3929 million in 2025 to US$ 5054 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

In 2024, global Rotary Compressor for Air Conditioner production reached approximately 13,100 k units?with an average global market price of around US$ 300 per unit, a single-line production capacity of approximately 10,000 units/year, and a gross profit margin of approximately 10%-30%. Rotary Compressor for Air Conditioner is a type of positive displacement compressor that compresses refrigerant gas through the rotational motion of a roller inside a cylindrical chamber. During operation, a roller mounted eccentrically on the motor shaft rotates within the cylinder, and a spring-loaded vane divides the compression chamber into suction and discharge regions. As the roller turns, the refrigerant gas is drawn into the suction side, compressed by the decreasing volume, and discharged as a high-pressure gas to the condenser. Rotary compressors are widely used in residential and light commercial air conditioners due to their compact design, smooth operation, and relatively low noise level. Compared with reciprocating compressors, rotary compressors have fewer moving parts, resulting in higher mechanical reliability and reduced vibration.

United States market for Rotary Compressor for Air Conditioner is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
