At the same bottom of the swing drive, there is a big and small gear, which will rotate the hydrostatic housing through the swing gear and bearing or slewing bearing. Most swing motions use a single or double reduction rack and pinion set. In order to ensure reliable shaft fixation and accurate bearing preload, the traditional rotary drive uses an integral pinion with a bearing nut shaft fixation system. All swing drives use large

capacity tapered roller bearings. Many popular swing drive applications, such as excavators and various loaders, use high-frequency cycles of continuous reverse rotation, but some swing drive applications are only used for positioning.
