The global Rotary Encoder(Grating) market size is predicted to grow from US\$ 42.93 million in 2025 to US\$ 63.95 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

In 2025, global production of rotary encoder(grating) reached 23,440 units, with an average selling price of US\$1,872 per unit. A circular grating refers to a grating with equally spaced etched lines/tracks on a disk or ring substrate. It is read by a reading head using optical/sensing methods, converting the rotational angular position and speed into electrical signals that can be used for servo control and measurement. Applications include CNC machine tools and rotary tables, robot joints and servo motor feedback, semiconductor manufacturing and testing equipment, precision measuring machines/CMMs, and ultra-precision machining equipment. The upstream of the industry chain includes substrates (glass/low-expansion materials/stainless steel strip), consumables for photolithography/etching or laser direct writing processes (photoresist, developing/etching chemicals), precision coating and surface treatment, and high-precision testing and calibration equipment (roundness, scribing error, thermal stability); the midstream involves circular grating manufacturing and calibration; the downstream enters angle encoder/rotary encoder manufacturers and motion control system integrators, ultimately selling to OEMs of machine tools, robots, semiconductor equipment, measuring machines, etc. Gross profit margin is approximately 35%–50%.

United States market for Rotary Encoder(Grating) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
