Rotary indexing machine is the rotary motion equipment which realizes the intermittent movement. Precision, speed, and life are three important elements for rotary indexing machine. Rotary indexing machine has a large transmission torque, high positioning accuracy, smooth high-speed operation, positioning self-locking, low noise and other notable features, is an ideal production replace the Geneva mechanism, no-full gear mechanism, the ratchet mechanism and other traditional intermittent agencies. Rotary indexing machine is a necessary kind of motion in many areas of mechanical engineering, precision measuring, machine assembling and inspection. The products are widely used in pharmaceutical machinery, presses automatic feed mechanism, food packaging machinery, glass machinery, ceramic machinery, tobacco machinery, filling machinery, printing machinery, electrical machinery, machining centers, automatic tool changer and other automated machinery.

Asia-Pacific has the largest sales in rotary indexing machine market, while the North America is the second sales volume market for rotary indexing machine in 2019. Due to the impact of COVID-19 large-scale quarantines, travel restrictions, and social-distancing measures drive a sharp fall in consumer and business spending in the beginning of 2020, producing a recession. COVID-19 is treatable and controllable. After

the COVID-19 epidemic, the market will gradually return to normal.
