The global Rotary Magnetron market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A rotary magnetron is a type of physical vapor deposition (PVD)puttering system used in thin film coating applications It consists of a rotating magnet array within the sputter cathode assembly, which creates a high-density plasma and the coating uniformity across the substrate. This technology enables the deposition of thin films with excellent adhesion, high density, and precise thickness control. The rotary magnetron enhances coating efficiency and is commonly used in various industries, including optics, electronics, and automotive, where high-quality thin film coatings are essential for performance and aesthetic reasons.

The industry trend for rotary magnetron technology is characterized by a growing emphasis on advanced materials and process control. Manufacturers are increasingly focusing on developing innovative magnetron designs, improving target utilization, and enhancing deposition rates to meet the growing demand for high-performance coatings. Additionally, efforts are being made to incorporate automation and advanced monitoring systems into rotary magnetron technology, aiming at improved productivity, reduced maintenance, and enhanced coating quality, aligned with industry requirements for efficient and sustainable thin film coatings.
