The rotary multi-spring seal is a type of mechanical seal designed specifically for rotating equipment. It provides uniform sealing pressure through multiple independent springs to ensure excellent sealing effect under dynamic conditions. This sealing structure can effectively compensate for axial, radial and angular displacements, has good followability and stability, and is suitable for pumps, compressors and other rotating machinery to prevent leakage of working media and protect the environment. The multi-spring design enables the seal to perform well in the face of vibration and misalignment, improving the safety and reliability of equipment operation.
